The main aim of the research is to study the influence of information impact including that sent via water on the state of different bio systems.

With this purpose, the experiments have been conducted with several bio systems used as bio indicators: 1) eggs and larvae of fishes, 2) plants - hybrid of rye and wheat (triticale), 3) human live blood, and 4) human body .

Haemoscanning method of live blood as well as GDV bio electrography for evaluation of people's energetic state were used to assess the results of the information impact on the human being.

The following information impacts were used: the **prayer** (read to yourself) and **water with codes** for health correction (50 ml). 50 volunteers (differently aged men and women) underwent examination.

Influence of the restructured water on the survival of rainbow trout in embryogenesis

Verbally

1 column – control, 2 row – experiment (intention),
3 column – experiment (solution 1:1000),
4 column – experiment (prayer),

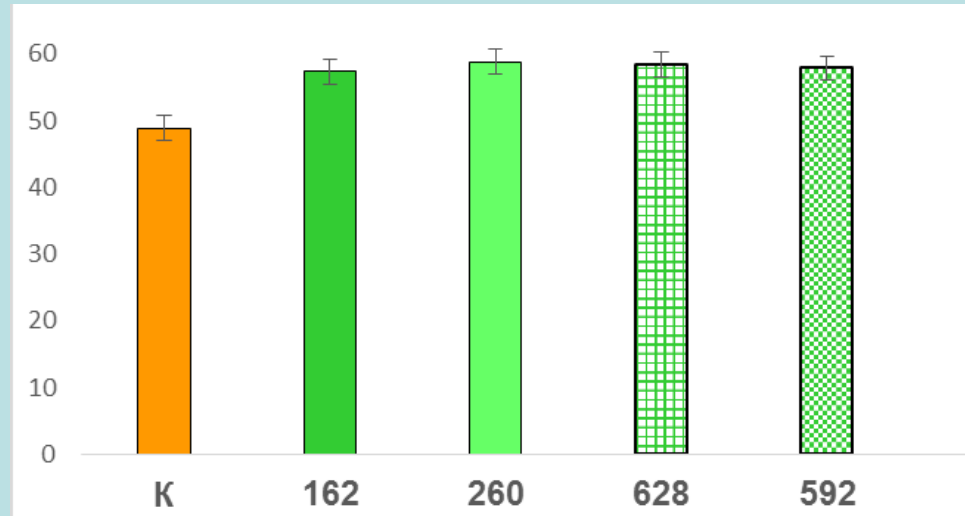

Via numeric codes (know how)

1 column–control, 2 column - experiment

Indicators on various development stages	Number of families	Counted, in eggs	Effectiveness, %
1. % fertilization (3d day)	24	2380	21.5
2. Embryos' survival on 12-14 days, %	32	4990	21.2
3. Embryos' survival on 'eye' stage,%	32	9570	24.5
4. Survival for the incubation period,%	28	20680	23.1

Influence of water with numeric codes on bio isometrics of triticale sprouts to increase the number of more productive “right” sprouts

По данным Маслоброд, Андрияшева, 2016

The number of “right” sprouts, %	Experiment №1	Experiment №2	Number of grains	Effectiveness, %
Control (water without codes)	48.9±2.04	48.9±2.25	1000	-
Experiment (water with four codes)	57.6±1.97***	57.9±2.38***	4000	18.4

Influence of the prayer (1) and water with numeric codes (2) with healing effect on blood studied by means of haemoscanning

According to haemoscanning results, the impact on blood of both the prayer and water with codes for healing gives informational signal, always stimulating the formation of “monetary” columns, which “fall apart” in 25-35 minutes resulting in the “free” state of erythrocytes, which is the most favourable for the erythrocytes functionality. The formation of “monetary” columns not connected with diseases was explained by Chyzhevsky (1959), who proved experimentally that their formation is made by the wave electromagnetic processes.

GDV indicators of effectiveness

The following indicators were used to prove the effectiveness of information influence by means of GDV data: 1) the energetic balance indicator, characterizing the harmony state of the 26 organs, and 2) evaluation of the state of energetic centres of the body (7 chakras) showing the rate of the energetic balance of the human body in general.

Decrease in the number of dark columns, which show the number of problematic organs, as well as Increase In the size of chakras and optimization of their location serve as the harmonization indicators. In pictures (right) the harmonization rates of the patient № 1 (religious man) and patient № 2 (non religious man who read the prayer only once) are shown.

Bottom pictures show the results of parallel research on the cell (blood) level and body level (GDV).

What can water do

Water can change the state of various bio systems, adequately responding to the information obtained via thoughts, words and numbers and changing its physical properties.

Water is not a substance, it's a being. Water can “hear, see, understand and execute”, but only in cases when **it is purposeful** and corresponds with the principle “**do not harm**”.

This means that water can treat us understanding our thoughts and images. American biologist Bruce Lipton (2005), the author of “New biology” writes that “man can change their body by controlling their thinking”

Conclusion

The peculiarities of water experimentally found out can be perceived as the **PHENOMENON** of water properties changing under the influence of information with the further adequate response of this influence by various bio systems.

The phenomenon makes it possible to understand that **water is the live informational matrix of Earth** which manages the live systems functioning facilitating their perfection. This concept is in accord with the principle of progressive biological evolution suggested by J.B. Lamarck in the 18th century as perfection of living systems in response to the environmental changes.
