Abstract:

Real, living organic water does not exist on this planet. Many scientists, meta-physicists and even spiritualists claim they have either found or produced “living” water but they are erroneously mistaken. This type of conscious water is only available through accessing the uni-genetic overlay of the physical atomic body.

Hydrolase is the real organic, atomic living water (H₂O₂He₃) that is the hydro-acoustic compound element of which our 144 organic living elements are composed (hydro-acoustic meaning “water-matter-base”) [¹]. For example, our brain is a hydro-acoustic engine that requires contaminant-free, mineralized water to operate at its maximum efficiency. Hydrolase is “conscious” living water and is one of the eternal life substances. The eternal-life “living-water” matrix within the cellular structure of the physical body is called the “Uni-Genetic Overlay” (UGU) [²].

In a breatharian physical atomic body, hydrolase is produced via a process called “Solar Symbiosis”, which allows for the chemical changes in the body that allow for the cellular structure to transmute and momentarily transform into light particles [³]. The area in the physical atomic body where hydrolase is produced is located in the fontanel area of the rear of the head.

After sixteen years of experiential research in the field of trans-harmonic, dark matter physics utilizing crystalline liquid light pre-matter (called Reion Units) for bio-regeneration, Jere Rivera-Dugenio, Ph.D. as leading researcher in this field, now reveals specific scalar energy technologies, techniques and data to begin producing and accreting the protoplasmic, pre-substance hydrolase, which communicates to the endoplasmic atomic hydrolase.
