

**The language of water: from information to meaning.
Scale-free neurodynamics in the dissipative many-body model of brain**

Giuseppe Vitiello
University of Salerno, Italy

The dissipative quantum model of brain will be reviewed and the role of water in the formation of meanings starting from the information obtained from perceptual inputs will be analysed. It will be stressed the role of coherent water dynamics in connection with the observed scale free, fractal self-similarity observed in brain functioning.
